Setup Laporan Expired SBU (Python Cron Job)

1. Install Dependencies

```
pip install -r requirements.txt
```

2. Konfigurasi Environment Variables

Tambahkan di `.env` atau export langsung:

```
export DB_HOST="your-project.supabase.co"
export DB_PORT="5432"
export DB_NAME="postgres"
export DB_USER="postgres"
export DB_PASSWORD="your-password"
export GOOGLE_CREDENTIALS_PATH="/path/to/service_account.json"
export GDRIVE_ROOT_FOLDER_ID="1-wHPWaIRH_GyLQ8RxTTrPz129GQRrvE9"
```

3. Google Drive Service Account

1. Buat di Google Cloud Console → APIs & Services → Credentials
2. Download JSON key, simpan sebagai `service_account.json`
3. Bagikan folder Google Drive target ke email service account (viewer/editor)

4. Jalankan Manual

```
python laporan_expired.py
```

5. Setup Cron Job (contoh setiap hari jam 08:00 GMT+7)

```
0 8 * * * cd /path/to/project && /usr/bin/python3 laporan_expired.py >> /var/log/laporan_expired.log
↪  2>&1
```

Catatan Penting

- Script menggunakan direct PostgreSQL connection (port 5432)
- Pastikan IP server hosting di-whitelist di Supabase Dashboard → Database → Connection Settings
- Jika tidak ingin upload Google Drive, biarkan saja `GOOGLE_CREDENTIALS_PATH` kosong atau file tidak ada; script akan tetap menyimpan file lokal
